

Flowless

Intelligent Water Management System
Automated Leak Prevention

What can Flowless do?

- Flowless uses state of the art technology to help you manage your water
- Flowless uses machine learning to understand how your building uses water and detects any changes
- Flowless uses the internet enabling you to control your water
- Flowless can alert facilities managers or can shut off the water itself in an emergency
- Flowless is connected to the cellular network and is not dependent on WiFi
- Flowless can detect and stop wastage and leaks saving your business money and preventing damage.

The Benefits

- 24/7 365 site monitoring
- No reliance on human intervention
- Can save £ thousands every year in water losses alone.
- Can prevent downtime and loss of business
- Assist in the protection of valuable assets
- Connected bureau able to assist in site issues, leaks or repairs.
- Ability to monitor other dynamics in addition to flow.

Why Flowless?

A highly advanced independent flow monitoring system – offering coverage 365 days a year
