EWEC/8.0

## TECHNICAL DATA SHEET

# EW ECOLOUR shower head EWEC/8.0

The ECOLOUR enables us to time our showers by the minute and live "green". The watersaving hand shower ECOLOUR lets you know by the LED-illuminated showerjet, how much water and how much time have already been used. Ideal for kids

The ECOLOUR showerhead has a memory function. The already used time can be saved for up to 2 minutes if the user interrupts the water supply. When turning on the water supply again the ECOLOUR will continue countdown. With a low water consumption this showerhead provides a luxurious shower experience.

The ECOLOUR is powered by the unique isoflow valve. This worldwide patented valve regulates the flow of water to exactly 8 litres per minute regardless of the water pressure so you always shower with the optimum water flow. In addition to its precision, the isoflow valve is characterized by minimal noise and longevity.

### What is isoflow?

Isoflow has a unique, patented design. The O-ring is not exposed to the water but is protected by the two adjusting elements, which provide for the variable opening. Thus it combines precise flow rate control with low noise and long service life.

### Key features

---

- Water saving patented volumiser technology
- Twist action head with 4 settings: hydro, cascade, massage & relax flow
- Wipe clean rubber nodules
- Retrofittable, simple, easy installation
- Minimal noise and longevity

### Benefits

---

- Eco shower that feels like a high flow shower
- Regulated waterflow of exactly 8 litres per minute
- Save heating energy through saving water
- Skin feels clean, refreshed and softer

**REDUCES WATER AND ENERGY CONSUMPTION BY UP TO 70%**
